

PRODUCT OVERVIEW

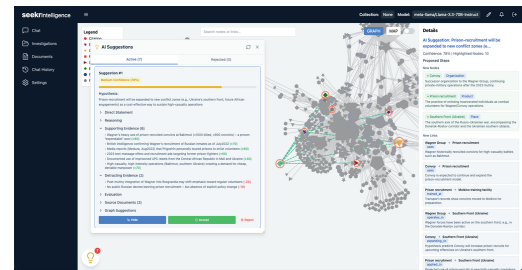

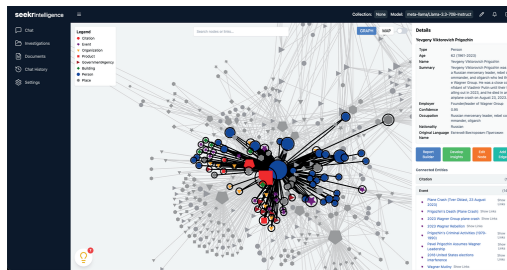

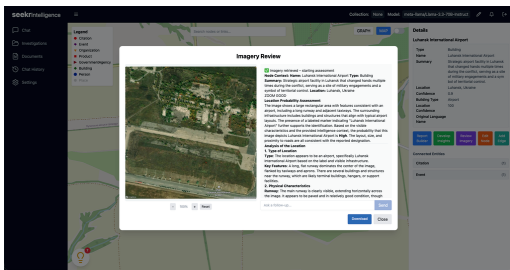

SeekrIntel

The AI Force Multiplier for Faster, Smarter Investigations

As global criminal and terrorist networks grow in complexity, investigators need AI that can keep pace with evolving adversaries. SeekrIntel is that edge—a tireless digital co-investigator that processes millions of data points and documents in seconds, automatically connecting the dots across people, places, and patterns.

Built with the SeekrFlow™ Enterprise AI Platform, SeekrIntel turns raw data into actionable intelligence in seconds. With built-in explainability, every AI-generated insight is traceable back to its source—audit-ready from day one. It complements human instincts, uncovering and mapping hidden links and illuminating criminal, terrorist, financial, and supply chain networks. With machine-speed, investigators can now dismantle threats, surface deep insights, and shrink investigations from months to minutes—without adding resources.

Traditional Investigations are Limiting

Traditional investigative processes are manual, require investigators to uncover and analyze disparate and siloed data, and delay investigations for months.

⚠️ MANUAL

Human investigators do not have the right information at the right time, and must sift through vast amounts of data, spending months understanding and connecting that data to reveal patterns.

⚠️ REACTIVE

Human investigators cannot proactively detect or see emerging threats in real-time, unless they know what they are looking for and actively look for it.

⚠️ LIMITED

Human investigators cannot keep up with increasing volumes of real-time Internet, video, and location-based data, often missing deep and hidden connections that could proactively thwart attacks before they happen.

SeekrIntel is a Force Multiplier for Investigations

✓ TRANSPARENT

Drill down into original data sources behind AI answers and audit investigation data, to ensure trust and reliability.

✓ DYNAMIC

Instantly surfaces hidden connections across people, entities, places, and events in real-time, and plots these networks on dynamic, interactive graphs and maps, so investigators have the right information at the right time.

✓ FAST

Upload case files, social chatter, URLs, or foreign-language docs—SeekrIntel cleans, extracts insights, and generates network graphs and dossiers on target entities in minutes.

✓ INTUITIVE

Ask natural language questions ("Which networks overlap?" "What events or transactions coincide with this person's movements?" "Who are the key facilitators?"), and trace links across time, geography, and digital activity patterns, to track presence and intent.
